

Terms for this resource

You can use these personally with any child you work with but you **MUST NOT** share them with others or put them on a public sharing platform such as School websites, Facebook groups or google drives.

You can share on a school platform such as google classroom or similar where you are sharing just with your colleagues or with your children.

You can use them to decorate worksheets that you create, stickers to print and stickers to use digitally to praise and encourage the children you work with.

You can link to the post on our website for other people to download if you want other people to benefit from these.

They are free for you to use but are still copyright to Elsa-Support

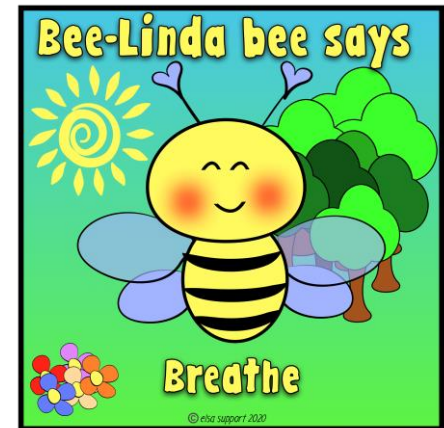

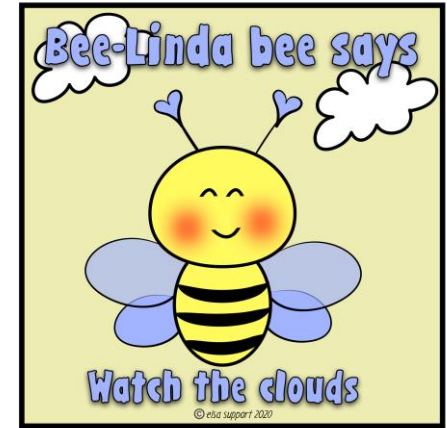

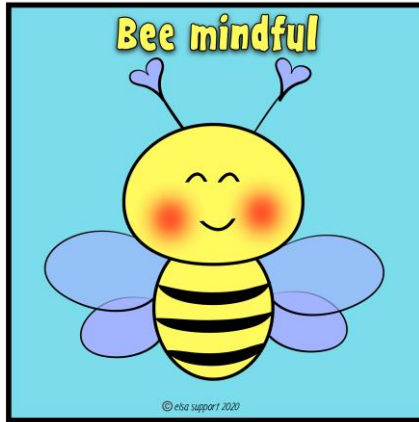

These have all been drawn by me and must not be altered in anyway.

They must not be used for commercial gain in anyway. I am giving them to you for free and I don't expect to see them for sale anywhere else.

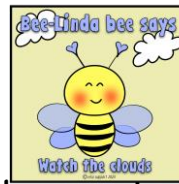

♡Debbie♡

Digital Stickers for praising electronically

Digital stickers

These are just image files with a transparent background so you can basically use just like you would an image. The beauty of these is the *transparent background* so you can overlay them over basically anything. There are 11 image files in the pack. You can insert them into anything where you can insert a photo or graphic.

- ☐ You could add to some work you are marking for a child
- ☐ You could add as an attachment to a child you are emailing
- ☐ You could add to a photograph, there are lots of apps out there that you can do this with but will show you a simple way with PowerPoint. I think most people have that!
- ☐ You could add it to a little note you are sending to a child in word

You could even make a sheet of real stickers if you want to by pasting into a word document and then printing on 'sticker paper'.

I have just added one to this note for you! See how simple it is! You can resize them from small to HUGE. The image quality is 300dpi so perfect for enlarging too.

See how crisp it is to enlarge!

Click the image for a
huge pack of stickers

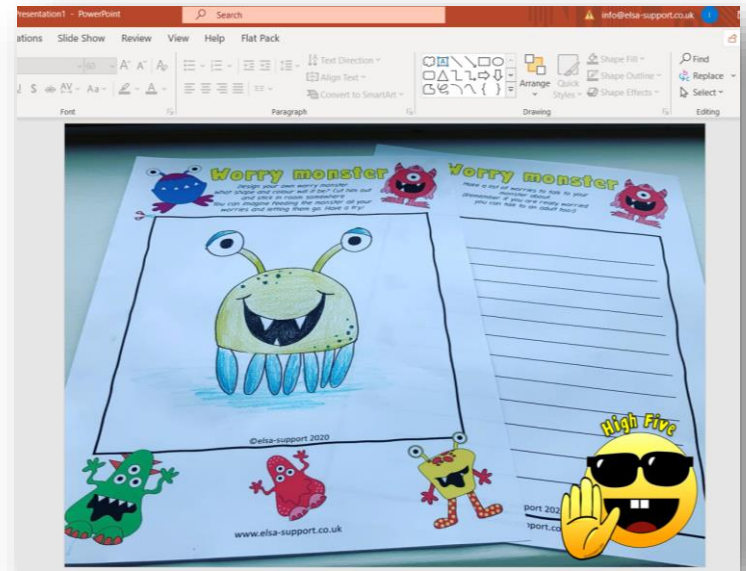

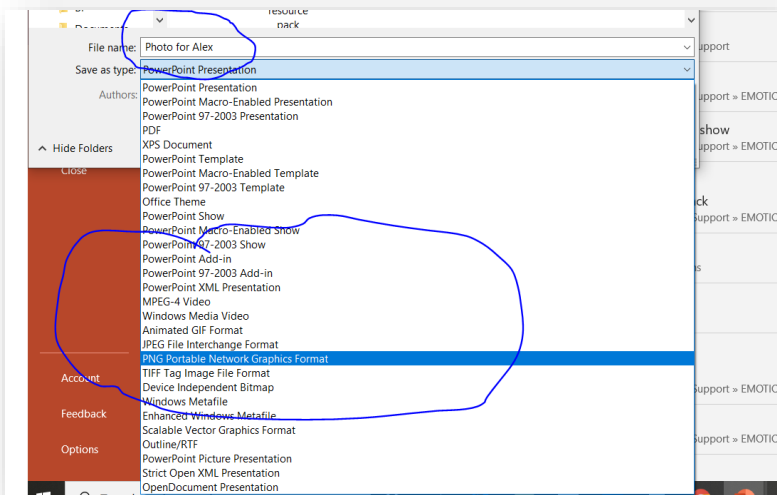

Let's have a look at how we can add to a photograph using PowerPoint

Open a new PowerPoint

Insert your photograph

Insert your sticker, resize it to the size you want to use.

Now you are going to save it as a PNG file (That is an image file)

Click File

Click 'save as'

Find somewhere to save your file

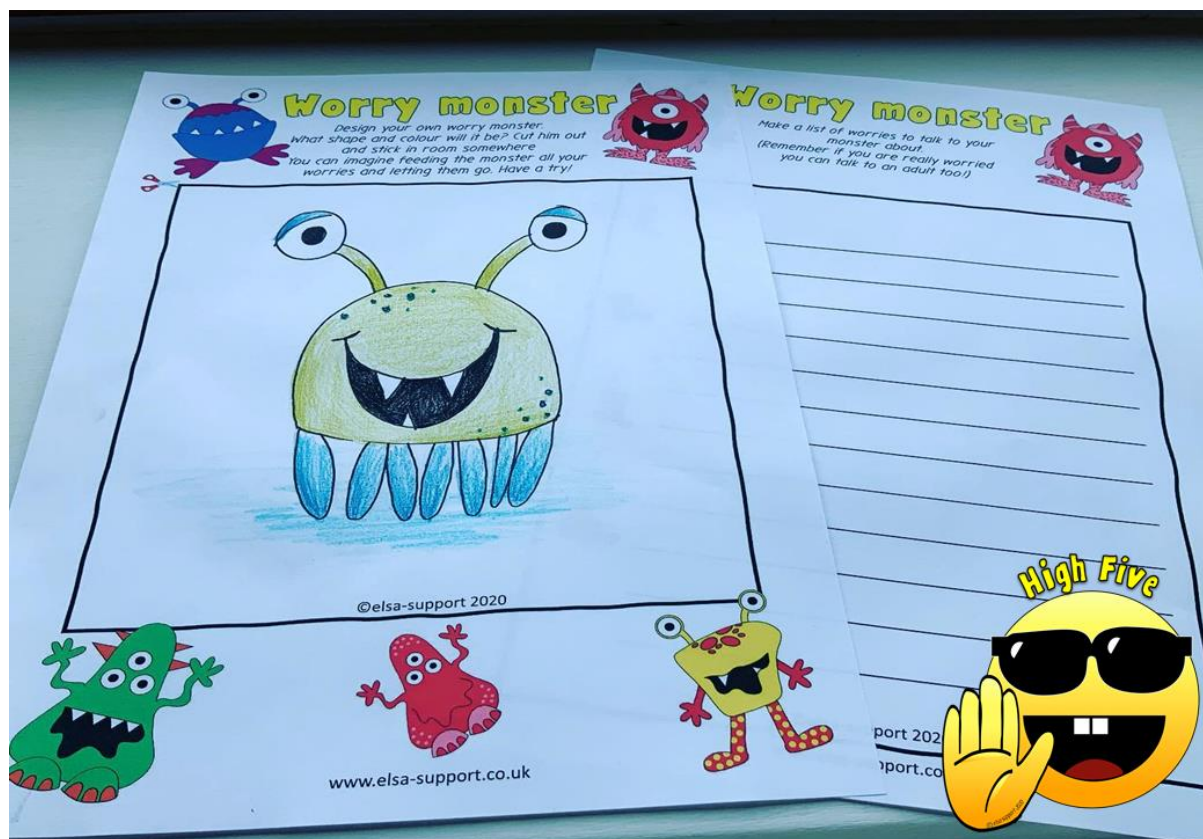

Give your file a name

Choose PNG file

Then save it. It will ask you if you want to save just this slide. Click that.

On the next page you will see the file I have saved

This is now an image file which you can send back to the child as an attachment. It might sound a bit complicated but do have a go! You could also use PAINT to add the image too or have a look for an app which allows you to add things to images.

Have fun with them.
